THE ROYAL SOCIETY
INTERNATIONAL GEOPHYSICAL YEAR
ANTARCTIC EXPEDITION

HALLEY BAY
COATS LAND, FALKLAND ISLANDS DEPENDENCIES
1955–1959

The Royal Society Expedition to Halley Bay in Antarctica was one of the major British contributions to the International Geophysical Year. An extensive research programme in meteorology, geomagnetism, aurora and airglow, ionospheric physics, radio astronomy, glaciology, and seismology was carried out at this Base.

All the experimental observations and derived data are published in a series of four volumes: size royal quarto (12½ × 9¾ in.). Bound in maroon cloth with gold lettering.

Price £7. ($23.00) each volume.

Volume II. Results of ionospheric vertical soundings, absorption and drift measurements. Results of radio-star scintillation measurements and of radio-echo observations of aurorae and meteors.

Volume III. Seismological bulletin and notes. Meteorological observations (upper-air radio soundings and radar wind observations; total, diffuse and net radiation measurements; total, surface and balloon-borne ozone determinations).

Volume IV. Surface meteorological observations. Glaciological observations. Emperor Penguin studies. Appendixes dealing with technical aspects of Base operation.
# CONTENTS

Energy transport from mitochondria to nuclei.
By W. O. JAMES, F.R.S. and ANNE M. RICHENS. (Plates 20 and 21) 149

Interference with the uptake of guinea-pig agglutinins in mice due to fractions of papain hydrolyzed rabbit γ-globulin.
By I. G. MORRIS . . . . . . . . . . . 160

Electron microscopy of the platelets in artificial thrombi.
By J. E. FRENCH and J. C. F. POOLE. (Plates 22 to 27) . . 170

An examination of the ribonucleic acids in the HeLa cell with special reference to current theory about the transfer of information from nucleus to cytoplasm.
By H. HARRIS, H. W. FISHER, A. RODGERS, T. SPENCER and J. W. WATTs. (Plates 28 and 29) . . . . . . . . . . . 177

Proprioceptors, bristle receptors, efferent sensory impulses, neurofibrils and number of axons in the parapodial nerve of the polychaete Harmothoe.
By G. A. HORRIDGE. (Plate 30 to 32) . . . . . . . . . . . 199

A study of changes in flocculence in a single cell culture of a strain of Saccharomyces cerevisiae.
By V. E. CHESTER . . . . . . . . . . . 223

Metabolism of haemoglobin and haematin compounds in Ascaris lumbricoides.
By M. H. SMITH and D. L. LEE. . . . . . . . . . . . . . 234

Physiological studies on acid metabolism in green plants. VIII. The utilization of labelled pyruvate, fumarate and glucose in Kalanchoe leaves in the dark.
By J. W. BRADBEER and S. L. RANSON . . . . . . . . . . . 258

Physiological studies on acid metabolism in green plants. IX. The distribution of 14C in malate of darkened Kalanchoe leaf fragments after infiltration with labelled pyruvate.
By J. W. BRADBEER . . . . . . . . . . . 279
