General Notes on the Preparation of Scientific Papers
Revised Edition August 1974

**General notes on the preparation of scientific papers** is a guide for authors, enabling them to present their papers in the most acceptable way from the outset, so reducing work and speeding the rate of publication.

The third edition has been carefully compiled with assistance from the editors of various scientific journals: the Notes thus become more authoritative as a guide to current practice and as an aid to established authors as well as to those who are writing their first papers.

32 pages 210 x 150mm illustrated
Paper cover only

**QUANTITIES, UNITS, AND SYMBOLS**

Second edition 1975

This handbook contains in a convenient form a very great deal of information on SI (the International System of Units), symbols for physical quantities, recommended forms for many aspects of scientific writing including mathematical presentation, labelling of graphs and tables, preferred placements and type founts for subscripts and superscripts, favoured abbreviations, etc. It also includes recommended values of physical constants. While SI and other internationally recommended practices are emphasized, values of conversion factors are given for use with imperial units and other units outside SI. References to original international authority are quoted.

Its compact size makes *Quantities, Units, and Symbols* an invaluable aid for scientific writing for all authors who wish to follow modern practice especially in physics and chemistry. Equally it should be an immediately available guide for teachers in higher education many of whom will wish their students to own a copy. It is also invaluable for the reader who has found some unfamiliar notation or terminology, not least when he has strayed from his own narrow specialism.

54 pages 250 x 176mm Paper cover only

CONTENTS

MARR, D. & ULLMAN, S.  
Directional selectivity and its use in early visual processing.  
[Plate 1]  
Pages 151–180

COLQUHOUN, D. & SHERIDAN, R. E.  
The modes of action of gallamine  
181–203

COLQUHOUN, D. & HAWKES, A. G.  
On the stochastic properties of single ion channels  
205–235

ROUND, F. E. & CRAWFORD, R. M.  
The lines of evolution of the Bacillariophyta. I. Origin.  
[Plates 1–10]  
237–260

MARCHIAFAVA, P. L. & WAGNER, H. G.  
Interactions leading to colour opponency in ganglion cells of  
the turtle retina  
261–267
