

# HIGHLIGHTS OF BRITISH SCIENCE

'Britain has a great tradition in natural science. From the time of the so-called scientific revolution of the mid-seventeenth century with the foundation of the Royal Society at the heart of it, British scientists have been in the forefront of advances not merely in fundamental science but also in its application to the practical problems of everyday life. Science, of course, knows no national boundaries and it owes much of its progress and vitality to the free exchange of information and ideas between scientists in all countries. It is nevertheless true that, for a variety of reasons, some countries, of which Britain is one, have made contributions out of all proportion to their physical size and population. Today we are in the midst of a worldwide economic recession which has indeed affected Britain more severely than some other highly industrialized nations. Since economic progress and with it our living standards depend nowadays almost entirely on advances in science and in technology based upon it, it is perhaps not surprising that some members of the public should wonder whether we have fallen behind other nations and whether our expenditure on science and scientific research is being misdirected. Nothing could be further from the truth. Our record during the past twenty-five years is an enviable one and our scientific research is vigorous as ever, flushed with success and full of promise. Britain has made and continues to make outstanding contributions in many and diverse fields of science. Some of these are set out in this book and it is my hope that its contents will not only stimulate appreciation of some highlights in British science but will indicate also its promise for the future.'

Extract from Lord Todd's Preface

## CONTENTS

Discoveries about the universe  
Recent advances in weather forecasting  
Research in seas and oceans  
Contributions of scientific discoveries to increases in agricultural productivity  
Science and the development of nuclear energy  
The jubilant electron  
Developments in electron microscopy and microanalysis  
Chemistry in microtime  
The intracellular electrode: 25 years of research in cellular electro-physiology  
Molecules of life  
High blood pressure: the evolution of drug treatment: British contribution

240 pages 44 plates

ISBN 0 85403 104 9

Price including packing and postage

£8.00 (U.K. addresses) £8.25 (overseas addresses)

## CONTENTS

- PEICHL, L. & WÄSSLE, H. *pages* 139-156  
Morphological identification of on- and off-centre brisk transient (Y) cells in the rat retina. [Plates 1-3] (With an appendix by B. B. Boycott & L. Peichl; Neurofibrillar staining of cat retinae.)
- WÄSSLE, H., PEICHL, L. & BOYCOTT, B. B. 157-175  
Morphology and topography of on- and off-alpha cells in the cat retina. [Plates 1-3]
- WÄSSLE, H., BOYCOTT, B. B. & ILLING, R.-B. 177-195  
Morphology and mosaic of on- and off-beta cells in the cat retina and some functional considerations. [Plates 1 and 2]
- MILEDI, R. & PARKER, I. 197-211  
Calcium transients recorded with arsenazo III in the presynaptic terminal of the squid giant synapse
- MACMILLAN, D. L., SILVEY, G. & WILSON, I. S. 213-231  
Coordination of the movements of the appendages in the Tasmanian mountain shrimp *Anaspides tasmaniae* (Crustacea; Malacostraca; Syncarida)
- WILLSHAW, D. J. 233-252  
The establishment and the subsequent elimination of polyneuronal innervation of developing muscle: theoretical considerations
- TORRE, V. & OWEN, W. G. 253-261  
Ionic basis of high-pass filtering of small signals by the network of retinal rods in the toad
