£1.00 £1.05 T

This handbook contains in a convenient form a very great deal of information on SI (the International System of Units), symbols for physical quantities, recommended forms for many aspects of scientific writing including mathematical presentation, labelling of graphs and tables, preferred placements and type founts for subscripts and superscripts, favoured abbreviations, etc. It also includes recommended values of physical constants. While SI and other internationally recommended practices are emphasized, values of conversion factors are given for use with imperial units and other units outside SI. References to original international authority are quoted.

Its compact size makes *Quantities, Units, and Symbols* an invaluable aid for scientific writing for all authors who wish to follow modern practice especially in physics and chemistry. Equally it should be an immediately available guide for teachers in higher education many of whom will wish their students to own a copy. It is also invaluable for the reader who has found some unfamiliar notation or terminology, not least when he has strayed from his own narrow specialism.

The contents include:

- Physical quantities and symbols for physical quantities
- Units and symbols for units
- Numbers
- Recommended mathematical symbols
- Chemical elements, nuclides, and particles
- Quantum states
- Nuclear physics
- Thermodynamic results
- Galvanic cells
- Some common abbreviations
- Recommended values of physical constants
- Sources
- Bibliography

To encourage the widespread availability and use of Q.U.S. (as it is commonly known) the following special prices are offered for orders for multiple copies:

6 Carlton House Terrace, London SW1Y 5AG
CONTENTS

Horn, G.
Review Lecture. Neural mechanisms of learning: an analysis of imprinting in the domestic chick

Neyman, J. & Puri, P. S.
A hypothetical stochastic mechanism of radiation effects in single cells. [Plate 1]

Heath, O. V. S. & Meidner, H.
Feedback processes in the opening of leaf stomata in light

Corbet, A. D., McKnight, A. T. & Kosterlitz, H. W.
Tetraethylammonium facilitates the stimulation-evoked loss of the enkephalins from the myenteric plexus of guinea-pig ileum

Tolhurst, D. J. & Thompson, I. D.
On the variety of spatial frequency selectivities shown by neurons in area 17 of the cat

McHanwell, S. & Biscoe, T. J.
The sizes of motoneurons supplying hindlimb muscles in the mouse. [Plate 1]

Burton, D.
Physiological responses of melanophores and xanthophores of hypophysectomized and spinal winter flounder, Pseudopleuronectes americanus Walbaum

Ginsborg, B. L., McLachlan, Elspeth M., Martin, A. R. & Searl, J. W.
The computation of simulated endplate potentials

Miledi, R. & Uchitel, O. D.
Induction of action potentials in frog slow muscle fibres paralysed by α-bungarotoxin
