The Royal Society is an independent scientific academy founded in 1660 and self-governing under Royal Charter. The Society has three roles, as the scientific academy of the United Kingdom, as a learned society, and as a funding body.

Objectives of the Royal Society are to:
- recognise excellence in science
- support leading-edge scientific research and its applications
- stimulate international interaction
- further the role of science, engineering and technology in society
- promote the public’s understanding of science
- provide independent authoritative advice on matters relating to science, engineering and technology
- encourage research into the history of science

Proc. R. Soc. B articles are published regularly online and in bi-monthly print issues. Along with all Royal Society journals, we are committed to archiving and providing perpetual access. Although papers are limited to ten journal pages in length (with a page-charge for articles exceeding six pages), there is the facility for including Electronic Supplementary Material (ESM). Contents of the ESM might include details of methods, derivations of equations, large tables of data, DNA sequences and computer programs.

The printed version of this article will be available on the Royal Society’s website, www.pubs.royalsoc.ac.uk/proceedings, for all registered users.
