AIMS AND SCOPE

Research papers. *Proc. R. Soc. B* welcomes articles of high quality in all aspects of biology. Currently, it is particularly strong in ecology in the widest sense, and behavioural and evolutionary biology. *Proc. R. Soc. B* has also published significant numbers of papers in epidemiology, human biology, neuroscience, palaeontology and biomechanics. Authors are encouraged to submit articles not only in these fields, but in all branches of biology. The criteria for selection are scientific excellence, originality and potential interest to a wide spectrum of biologists.

Review papers. The journal also publishes topical reviews in emerging areas of biological science that will be of interest to non-specialists. Topical reviews are commissioned but unsolicited submissions will be considered.

Comment papers. Short additions to, or criticisms of, papers already published will also be considered. At the discretion of the editors, the authors of the original paper may be invited to reply. Comment papers should be short, interesting and conform to the rules of good manners.
