AIMS AND SCOPE
Research papers. Proc. R. Soc. B welcomes articles of high quality in all aspects of biology. Currently, it is particularly strong in ecology in the wider sense, and behavioural and evolutionary biology. Proc. R. Soc. B publishes a significant number of papers in epidemiology, human biology, palaeontology, palaeoecology and biogeography. Articles are encouraged to submit articles not only in these fields, but in all branches of biology.

The criteria for selection are scientific excellence, originality and potential interest to a wide spectrum of biologists.

Review papers. The journal also publishes topical reviews in emerging areas of biological science. These might include details of methods, derivations of equations, including Electronic Supplementary Material (ESM). Contents of the journal also publish significant numbers of papers about the reports received from the referees and/or Editorial Board members. The criteria for selection are scientific excellence, originality and interest across disciplines within biology. The Editors are responsible for all editorial decisions and they make these decisions based on the reports received from the referees and/or Editorial Board members.

Many more good manuscripts are submitted to us than we have space to print, and we give preference to those that present significant advances of broad interest. Submission of preliminary reports, of articles that merely confirm previous findings, and of articles that are likely to interest only small groups of specialists, is not encouraged. All articles are sent to Editorial Board members for an initial assessment of their suitability, and may be returned to authors without in-depth peer review if this assessment makes it seem unlikely that they will be accepted.

The journal also publishes topical reviews in emerging areas of biological science.
