Selection criteria
The criteria for selection are scientific excellence, originality and interest across disciplines within biology. The Editors are responsible for all editorial decisions and they make these decisions based on the reports received from the referees and/or Editorial Board members.

Many more good manuscripts are submitted to us than we have space to print, and we give preference to those that present significant advances of broad interest. Submission of preliminary reports, of articles that merely confirm previous findings, and of articles that are likely to interest only small groups of specialists, is not encouraged. All articles are sent to Editorial Board members for an initial assessment of their suitability, and may be returned to authors without in-depth peer review if this assessment makes it seem unlikely that they will be accepted.

Publications
Proc R Soc B articles are published regularly online and in print issues twice a month. Along with all Royal Society journals, we are committed to archiving and providing perpetual access. Although papers are limited to ten journal pages in length (with a page-charge for articles exceeding six pages), there is the facility for including Electronic Supplementary Material (ESM). Contents of the ESM might include details of methods, derivations of equations, large tables of data, DNA sequences and computer programs.

The Royal Society, the national academy of science of the UK and the Commonwealth, is at the cutting edge of the support of the UK’s top scientists, engineers and technologists, influencing science policy, debate and scientific issues with the public and policymakers. We influence science policy, debate and scientific issues with the public and policymakers. We are committed to archiving and providing perpetual access. Although papers are limited to ten journal pages in length (with a page-charge for articles exceeding six pages), there is the facility for including Electronic Supplementary Material (ESM). Contents of the ESM might include details of methods, derivations of equations, large tables of data, DNA sequences and computer programs.

Proceedings of the Royal Society B

Aims and scope
Research papers. Proc R Soc B welcome articles of high quality in all aspects of biology. Currently, it is particularly strong in ecology, the earth sciences, and biochemical and evolutionary biology. Proc R Soc B has a high publication rate and presents significant numbers of papers in epidemiology, human biology, micropalaeontology, palaeoecology and biogeography. Authors are encouraged to submit articles not only in these fields, but in all branches of biology.

The criteria for selection are scientific excellence, originality and potential interest to a wide-scope of biologists.

Review papers. The journal also publishes topical reviews in emerging areas of biological science that will be of interest to non-specialists. Special issues are commissioned but not restricted.

Concurrent papers. Short additions to, or criticisms of, papers already published in this journal will also be considered. At the discretion of the editors, the authors of the original paper may be invited to reply. Concurrent papers should be short, interesting and conform to the rules of good manners.
