Cover image: A pair of adult male muskoxen at a long-term study site near Kangia, Greenland, that is the focus of ongoing research on ecological effects of climate change. The paper by Eric Post, in this issue of Proceedings D, indicates that herbivores by muskoxen and caribou counteracts the negative effects of experimental warming on plant community diversity and stability. See the paper here: http://dx.doi.org/10.1098/rspb.2012.2722

SUBSCRIPTIONS
2013 Proc. R. Soc. B ISSN 0962-8452 will be published twice a month. Full details on how to subscribe can be obtained either by contacting our journal fulfilment agent, Portland Customer Services, Commercie Way, Colchester CO4 9PR. Tel: +44 (0)207 9581; fax: +44 (0)207 7993; email: sales@portlands-services.com or by visiting our website at rospubs.royalsocietypublishing.org/Info/subscriptions. The Society is a Registered Charity No. 207043.

The Royal Society, the national academy of science of the UK and the Commonwealth, is at the cutting edge of scientific progress. We support many top young scientists, engineers and technologists, influence science policy, debate scientific issues with the public and much more. We are an independent, charitable body and derive our authoritative status from over 1400 Fellows and Foreign Members.

Because we want to expand knowledge and further the role of science and engineering in making the world a better place.

The Royal Society’s strategic priorities are to:
• invest in future scientific leaders and in innovation
• influence policymaking with the best scientific evidence
• ignite science and mathematics education,
• increase access to the best science internationally, and
• inspire an interest in the joy, wonder and excitement of scientific discovery.

For further information on the Society’s activities, please contact the following departments on the extension listed by dialing +44 (0)207 839 5581, or visit the Society’s website.

Electronic submission details
The Royal Society’s electronic submission and peer-review service provides Proc. R. Soc. B authors with the facility to submit their papers online. The service allows you to upload files in a reliable and user-friendly way, using a Web-based system. When your paper is received, an immediate acknowledgement is sent that details how you can track your contribution online. For full submission guidelines and access to all journal content please visit the Proc. R. Soc. B website, for further details see rspb.royalsocietypublishing.org

Selection criteria
The criteria for selection are: work of outstanding importance, scientific excellence, originality and potential interest to a wide spectrum of biologists.

AMs and scope
Research papers. Proc. R. Soc. B welcomes articles of outstanding quality in all aspects of biology. Currently, it is primarily in ecology in this widest sense, and includes all fields of biological science where biological explanations, predictions, or inferences are based on the study of living organisms and their interactions in populations and communities. This means that interdisciplinary research, which employs quantitative or computational approaches to answer biological questions, is included in an AMs and scope.

Research papers. The journal also publishes topical reviews in emerging areas of biological science that will be of interest to non-specialists. Topical reviews are commissioned but unrestricted submissions will be considered. Comment papers. Short additions to, or criticisms of, papers already published in this journal will also be considered. All decisions about the editors, the authors of the original paper, and the editors of the Comment papers should be short, and interesting in the light of good manners.

Responses. The journal also publishes short responses in emerging areas of biological science that will be of interest to non-specialists. Topical reviews are commissioned but unrestricted submissions will be considered. Comment papers. Short additions to, or criticisms of, papers already published in this journal will also be considered. All decisions about the editors, the authors of the original paper, and the editors of the Comment papers should be short, and interesting in the light of good manners.

Conditions of publication
Articles must not have been published previously, nor be under consideration for publication elsewhere. The main findings of the reporting of a scientific article by the media is embargoed until a period of 24 months from the date of the paper’s publication.

Guidance for authors
However, the printed version must include enough detail to satisfy most non-specialist readers. Supplementary data up to 10Mb is placed on the Society’s website free of charge. Larger datasets may be deposited in recognised public domain databases by the authors.

GUIDANCE FOR AUTHORS
